CLOUD SERVICES

With Our Kloud, Australian businesses receive a premium cloud service offering with feature-packed, individually tailored solutions to align with their business needs

QK
COMMUNICATION | IT | INNOVATION

Our Kloud provides Australian businesses with three first-class cloud services solutions to accommodate every workplace scenario. Whatever the size and complexity of your business, Our Kloud offers a unique cloud services package that aligns with your business needs and system requirements.

Private . Public . Hybrid

Whether you wish to manage your own data and security, rely on a solid third-party company for your IT, or combine these packages for the perfect overall solution, Our Kloud has the answers.

On Premise or Hybrid Cloud Models:
• Backup and Storage
• Colocation
• Disaster Recover
• Infrastructure as a Service (Iaas)
• Virtual Desktop Infrastructure (VDI)
• Virtual Server (VS)

Public Cloud Model:
• Backup and Storage
• Hosted Exchange

PRIVATE

When you desire full control over your business security, customer data, and system compliancy, Our Kloud's on premise cloud model is right for you. With Our Kloud's on premise cloud model, we host it, you manage it, and our trained support professionals are standing by 24x7 to ensure your business continuity.

PUBLIC (HOSTED SHARED)

If you are seeking a full-scale hosted solution for data backup and storage along with Hosted Exchange as your communication platform, Our Kloud's public (hosted shared) cloud model is the best solution. We store and manage your data in our protected state-of-the-art Data Centres, while you manage your business at hand.

HYBRID (ON PREMISE/HOSTED)

Our Kloud's hybrid cloud model offers a blended on premise and hosted solution, designed for customers who desire only partial management of their IT infrastructure. You rely on us for some hosted solutions along with an internal client server for other aspects of your IT infrastructure-managed at the level you desire.

BACKUP AND STORAGE

Our Kloud offers a trusted and secure solution for your valuable data. We provide regular automated backups, system monitoring, and the storage space you need, as you need it. At all times, your data is accurate, safe, secure and retrievable.

COLOCATION

Consider on premise or hybrid solutions for your infrastructure and equipment, and let Our Kloud provide colocation to reduce high-cost controls such as power, cooling, disaster recovery, and much needed data centre space, security, and resources.

DISASTER RECOVERY

Prepare for the unexpected with Our Kloud's private or hybrid cloud disaster recovery solution for the future. Our Kloud takes your data seriously to ensure the backup and safety of your data storage by relying on a state-of-the-art disaster recovery strategy for business continuity.

HOSTED EXCHANGE

Rely on Our Kloud's public cloud model to manage your enterprise data for full-scale business communications. We manage the complexities of Outlook on hosted Exchange in a cost-effective, scalable, secure and fully managed communications solution.

INFRASTRUCTURE AS A SERVICE (IAAS)

Using the power of the Internet, Our Kloud has the technical knowhow to establish, operate, and maintain your computer infrastructure in private or hybrid cloud configuration that works for your business including data centre space, hardware, network components, servers, software and storage.

VIRTUAL DESKTOP INFRASTRUCTURE (VDI)

When your company requires a client/server computing model, Our Kloud offers private or hybrid cloud version of Virtual Desktop Infrastructure (VDI) for increased user efficiencies in server-based storage for operating systems, personal settings, and data.

VIRTUAL SERVER (VS)

Rely on Our Kloud to host and manage a virtual server (VS) that can be onsite in our state-of-the-art data centres, or on premise at your business location. You receive scalable high-performance for multiple operating systems, secure communication, data management, software upgrades and more, to align with your business needs.
